

HAMILTON LITESTAT

Bespoke media panel

Decorative electrical wiring accessories and lighting controls manufacturer Hamilton Litestat has supplied a unique table-mounted media and power outlet for the impressive new Park Plaza Westminster Bridge hotel's 1021 contemporary bedrooms and suites.

The bespoke product was designed by Hamilton's team of experts, who worked closely with the hotel's architects to ensure that the final product met the aesthetic, engineering and safety requirements of one of London's largest hotels.

Hamilton's interpretation of the brief realised the designer's concept while meeting the functional criteria and the requirements of current electrical standards.

The panel features a combination of British 13 amp sockets, European and American sockets, a speaker socket for MP3 players and an internet connection point that allows guests to access the hotel's broadband network.

Given the hotel's prime central location the product has been designed and produced for the needs of both business and leisure guests who can easily make use of their own portable electrical equipment with no need for international adaptors. It also means that guests are not required to find a socket at a lower level or unplug any fixed hotel equipment.

ELSTEAD LIGHTING

Centrepiece

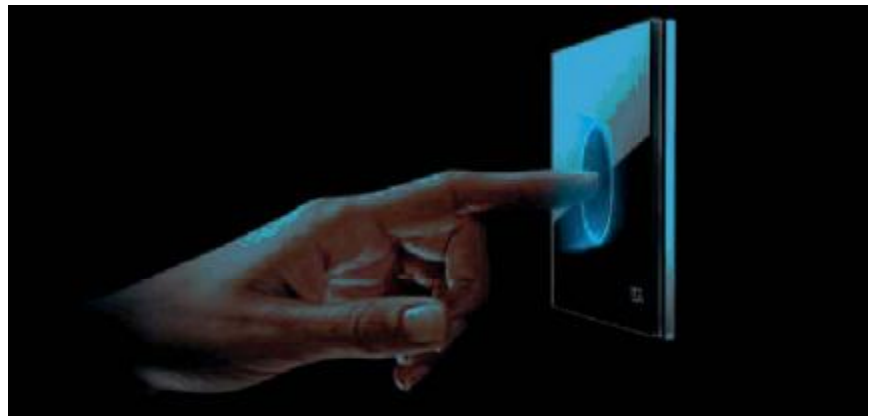

Elstead Lighting designs, manufactures and distributes quality decorative lighting for hospitality specifiers, interior designers and specialist retailers.

Among its extensive portfolio is the Christina 18 light chandelier which is hand finished in a silver/gold patina. It features intricate olive leaves, fine crystal drops, cut-glass sconces and is arranged over two tiers to provide an impressive centrepiece to any room setting or entrance.

The Christina range also includes a two-light wall fitting and smaller three-, five- or eight-light chandeliers which are convertible to semi-flush. The whole indoor and outdoor collection is available to view by requesting the new Elstead Lighting Catalogue 14.

NEA DESIGN

Full control with NEA

Vitrum by VDA is a state-of-the-art system that will control all aspects of a building's environment including lighting, access control, heating and air conditioning and AV media systems.

The touch-sensitive plates have built-in energy saving by setting lighting to 65% of maximum output when first touched thereby helping the environment and controlling energy consumption.

Developed and used in some of the finest hotels in the world, Nicholas Engert & Associates (NEA) is now using the product on a diverse range of projects including residential, spas and restaurants.

The Vitrum system can be controlled either by the iPad or through a television fitted with VDA's Power TV media service. Nicholas Engert & Associates will design a whole building around the Vitrum platform including lighting, networks, media and access control.
